

CBRILLIANCE

CHAIN NETWORK

Shared infrastructure for African
builders

AI, blockchain and governed liquidity for
products built to serve African markets.

PARTNER • USER • INVESTOR BRIEFING

A CBrilliance initiative

A fragmented starting point

African founders often assemble capital, infrastructure and market access one piece at a time.

CBC Network is designed to bring shared rails and a governed support path into the same operating environment.

A shared launch structure for African builders

One network connects the essential pieces teams need to move a credible idea toward a real product and paying users.

1 Shared rails

Network, wallet, settlement and developer tools

2 Governed support

Reviewed access to technical and capital resources

3 Route to market

Connected products, partners and local commerce

Support is governed by review, eligibility and available capacity.

One network, connected products

CBrilliance is building a connected digital environment where products can share infrastructure and serve different roles.

APPLICATIONS

JosCity • JosRide • future African AI and blockchain products

Products operating

EXCHANGE

CBrilliance Smart Exchange • CBX offering and exchange services

cbrilliancex.com

ACCESS

CBC wallet today • explorer and expanded network tools in development

cbcnets.com

BASE LAYER

CBC Network • shared chain, smart contracts, fees and ecosystem activity

Core infrastructure

Wallet available • Explorer in development

A \$5 million liquidity target

PROJECT-REPORTED PROGRESS

\$3,246,711.80

reported toward the \$5,000,000 target

\$1,753,288.20

balance to target

Reported sources

- AI trading split returns
- Sign-up fees
- Paid CBC Coin mining
- CBC Coin pre-sale

Liquidity release has a \$5 million threshold

CBrilliance states the liquidity contract permits unlocking only after the full target is reached.

The supplied materials does not include live contract address or audit report yet, those will be made public when Network fully launches.

CBC Coin and CBX Token serve different roles

CBC is the ecosystem currency. CBX is designed to support transaction fees and exchange utility.

CBC COIN

Network currency

Intended for transactions, commerce and activity across the CBC ecosystem and partner products.

CBC amount
transfer

CBX fee

charged separately

CBX TOKEN

Fee support token

Designed to pay CBC transaction charges, with separate exchange utilities listed on CBrillianceX.

Fee mechanics, conversion rules and low-balance handling depend on the deployed implementation.

Published supply and CBX sale structure

CBC COIN

1,000,000 CBC

700,000 public offer

70%

300,000 remaining allocation

CBX TOKEN

100,000,000 CBX max

70,000,000 public offering

70%

30,000,000 remaining allocation

CBX PUBLIC SALE STAGES

Stage 1

30,000,000

CBX

0.01 USDT

Stage 2

20,000,000

CBX

0.10 USDT

Stage 3

20,000,000

CBX

1.00 USDT

Full stage sell-through implies \$22.3M gross at listed prices. But target still remains just the Current treatment of proceeds at the \$1.753M gap as stated.

The CBC Smart Card brings the network closer to daily life

A physical and digital access layer can connect CBC balances with everyday services where local partners and approvals allow.

Transit

Fare and trip payments

Commerce

Merchant transactions

Services

Digital vouchers and access

The concept has been unveiled. Issuance, acceptance and a live payment service depend on a licensed issuer, processor, approved pilot and tested reconciliation.

JosCity and JosRide open the Smart City category

Two Jos-based services give the CBC ecosystem a practical place to build digital adoption and partner integrations.

JOSCITY

City services

Local discovery and services
Verified vendors and housing agents
Subscriptions and city service journeys

JOSRIDE

Mobility and delivery

Cars, Keke and bikes
Landmark and scheduled rides
Trips and package delivery

Reported pre-launch onboarding: 15 September 2026. CBC integration status is not confirmed.

1,000+

app installs

420

drivers

186

Keke

82

bikes

Where shared CBC infrastructure can support new products

The same rails can support African-owned products in several sectors as builders, customers and partners join the network.

AI services

Local-language tools, workflow assistants and sector models

Digital credentials

Verifiable identity and skills credentials with user consent

City services

Bookings, mobility, property and local service access

Trade records

Traceable records for goods, suppliers and services

Commerce

Merchant payments, loyalty and marketplace settlement

Public infrastructure

Shared records and data exchange for approved partners

These are major product areas. Each with a delivery partner, user demand, safeguards and a compliant operating model.

A growing CAGE Holdings portfolio

CAGE Holdings brings three brands into one group story, alongside digital products and reported international expansion.

CBrilliance

Network, ecosystem and Smart
City products

AfrESH

Education and African talent
initiatives

Genius WAV

Creative and technology ventures

Reported achievements

CBrilliance company launched in China

Project-reported supplier and manufacturer relationships across China and Asia

Corporate entity roles remain under verification.

Ways to participate in the CBC Network

Different participants contribute different strengths to the network.

- 01** **PRODUCT BUILDERS**
Bring an African-owned AI or blockchain product for assessment and network support.

- 02** **CITY AND COMMERCE PARTNERS**
Connect services, merchants, mobility operators and customer communities.

- 03** **TECHNOLOGY PARTNERS**
Support infrastructure, security, interoperability and local delivery.

- 04** **CAPITAL PARTICIPANTS**
Evaluate published offering terms, custody, rights, risks and proceeds allocation.

CBX utilities listed on CBrillianceX include fee discounts, launchpad allocation and staking rewards. Sale terms follow current exchange disclosures.

Shared liquidity follows a governed access path

A shared pool works when every allocation has a clear purpose, accountable approval and a way to measure results.

Access to shared resources is subject to review, eligibility, available capital and applicable law.

A staged path from infrastructure to adoption

The sequence below follows the 2026–2030 strategic horizon and depends on funding, security, regulation and adoption.

Strategic sequence, not a delivery guarantee

CBC NETWORK

Build products for African markets

CBrilliance invites product, city, commerce and technology partners to help develop the next layer of African digital infrastructure.
